

receive a request comprising a product identifier from a first one of the plurality of client computers,

query the database in response to the received request to retrieve chemical product data comprising a starting point formulation and chemical characteristics inherent to the starting point formulation,

send the chemical product data to the first client computer,

receive a purchase order comprising a request to purchase a product identified by the product identifier and target characteristics input by a user,

modify the starting point formulation based on the target characteristics input by the user, and

process the purchase order, wherein the purchase order comprises an order for purchase of a chemical product formulated in accordance with said modified starting point formulation.

20. A method for processing a chemical product transaction, the method comprising:

receiving at a server computer from a first one of a plurality of client computers a request identifying a chemical product;

querying a database in response to the received request to retrieve chemical product data comprising a starting point formulation and chemical characteristics inherent to the starting point formulation;

sending the chemical product data to the first client computer;

modifying the starting point formulation based on target characteristics input by a user

receiving a purchase order comprising a request to purchase the chemical product;
and

processing the purchase order, said purchase order comprising an order for purchase by the user of a chemical product formulated in accordance with said modified starting point formulation.

Marked-Up Copy

6. A networked computer system configured for commerce in chemical products, the system comprising:

a server configured to exchange data with a plurality of client computers;

a database operatively coupled to the server and storing chemical product data for a plurality of chemical products,

a memory operatively coupled to the server and comprising instructions to configure the server to:

receive a request comprising a product identifier from a first one of the plurality of client computers,

query the database in response to the received request to retrieve chemical product data comprising a starting point formulation and chemical characteristics inherent to a formulation of the chemical product~~the~~starting point formulation,

send the chemical product data to the first client computer,

receive a purchase order comprising a request to purchase a product identified by the product identifier and target characteristics input by a user,

modify the starting point formulation based on the target characteristics input by the user, and
